- MERN Stack
- Typing Skills
- Communication Skills

## Interests

---

- Website Development
- Cross-Platform App Development
- Web-Application Development
- System Software Development
- Learning Computer Science
- Learning about AI/ML

- **Text Editor Web App**

It is a simple UI Text Editor Web App, which is made in **HTML, CSS & Javascript** with responsiveness for various device types.

It is capable of making text bold, italic and underline and can adjust the alignment of text to right, center & left. It can also change the font-size and color of the text. For typing text into the app, it uses a textarea tag which is restricted to move only in y-axis and not in x-axis. Moreover, this app's UI is quite simple but user-friendly and visually appealing in looks.

Local storage of any text typed in this isn't possible as there's no such feature in this app. All in all, this app is fully functional in all its developed functionalities and can be used easily by users.

Github link of this app:-

[\*https://github.com/Alan-Abdul-Kalaam-25/Text-Editor-Lite\*](https://github.com/Alan-Abdul-Kalaam-25/Text-Editor-Lite)

- **Calculator App**

It's a basic GUI calculator app built using HTML, CSS and Javascript. This app can do all the basic arithmetic operations like add, subtract, multiply and divide. App's UI is very simple and user-friendly. All the mathematical operations are done using JS. User can delete all the content or a single character from the calculator's display by using AC and DE buttons respectively. Calculator element is situated in the centre of viewport by horizontal and vertical direction and has good background colour which adds more stars to this UI

- **Profile Card**

It's a UI of a good looking profile card webpage which looks professional in all its terms. It has a circular profile image with a rectangular background image that is overlapped on each other. It also contains two buttons namely follow and view profile which are styled in a good way. Displays number of followers, number of followed people and number of videos posted. Whenever profile picture is hovered a circular transition can be seen which increases user-interaction with the web page. Overall shape of this card is a rectangular with a unique colour background. Situated in centre of the page from all directions. In a nutshell, it has a quite cool UI.

[\*https://github.com/Alan-Abdul-Kalaam-25/Profile\\_Card\*](https://github.com/Alan-Abdul-Kalaam-25/Profile_Card)

- **Bootstrap Blogging Website**

It's a blogging website which is developed using a popular front-end framework, Bootstrap. This website has many components from bootstrap's official website like, navbar, text cards, image slider, login page, sign-up page, etc. With the help of framework, this website is fully responsive and quite simple and easy to navigate. It can both support blogger's and blog readers to create quality content and read the content with ease respectively.

Considering the whole website, its UI is nicely built and is also deployable in production.

- **Responsive Resume Design**

Responsive resume design is a modern looking template of resume built with only using HTML and CSS which is fully responsive to many device-types including a little importance to mobile devices i.e Smartphones and Tablets.

It has all the required sections which is necessary for any resume to be fully complete like personal information, contact information, education, experience, skills, etc. It's divided into two parts which can be distinguished by the two colours present in it. Profile picture can also be attached in it. Uses many icons from font awesome to make it more interactive. User can itself modify this template to their required use-case and start using this. At last, it's a good template for a modern looking resume design.
